# Take control of field inspection activities and records with QESTField Forms

With the introduction of QESTField Forms, inspectors are able to complete their inspection forms offline using predefined PDF templates as well as approve and distribute their forms directly from the device. Taken together with the connected functionality of QESTField Tests for recording test data and observations, and the planning capabilities of the QESTField Scheduler, the QESTField product suite represents a full solution for taking control and electronically tracking and organizing all field based activities.
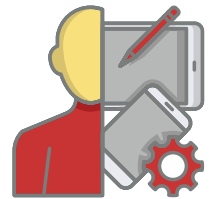

Mobile Application

Offline Data Entry

Leverage the power of Fillable PDF Forms

Fill, Approve and Publish from the Field

Tools like Adobe Acrobat allow quick and easy creation of fillable PDF templates from existing paper or electronic worksheets. Mapping the templates with QEST Platform fields is done through a drag and drop interface.

Checkboxes, dropdowns, radio buttons and all fillable PDF functionality supported by the PDF editor of choice are all available for use on the templates. PDF JavaScript can be used to support complex form logic and field calculations.

Give field users the ability to approve and distribute forms directly from their devices, based on their user rights. Alternatively, configure your forms for review and distribution from the office after management review. Forms may be distributed via email or directly to Construction Hive.
