

QUESTFIELD TESTS

Increase the efficiency of field testing with QESTField Tests

QESTField Tests is a mobile solution for field technicians to electronically replace paper-based information gathering on site for construction materials testing and geotechnical investigations. The software functions on hand-held devices (smartphones and tablets) and connects field testing and inspection staff with the laboratory or office.

QESTField Tests enables you to allocate, track and capture field related work in real time, improving visibility into field operations and simplifying report review and approval. It removes the need to physically move paper records, eliminates data transposition and reduces report turnaround times.

Efficiently manage workflow

Increase visibility from the laboratory to the field

Meet and exceed report turnaround deadlines

Keep current with always-on mobile device connectivity

“ QESTField proved its worth ... across PSI’s network of offices and major project sites. PSI realized almost immediate returns in the form of faster report delivery, reduction in data entry errors, significant reductions in clerical staff cost, and improved levels of customer satisfaction.”

Marshall Hammack,
CFO, Professional Service Industries, Inc.

“ We have decided to deploy QESTField for our field services personnel and are excited about the competitive advantage this will give us in the current challenging marketplace.”

Dan Larson,
President, American Engineering Testing, Inc
